Home Generators - Super Quiet - No Smoke

This backup generator / standby generator makes an excellent home generator. Forget natural gas or propane. Diesel today produces far more power and cost far less to maintain. Generators like this from Aurora make very little noise, no smoke and no visible exhaust. We mounted on on a trailer for this video but normally it sits on the ground where it has a small foot print. Unlike other generators, these ones are weather proof. You can take a garden house and soak it. They stay out in the rain and snow without a problem. The generators are fully automatic and include a ATS. The fuel tank is also built in.

HOME STANDBY GENERATORS: How They Work & How to Choose One

Watch this five minute explanation of how home standby generators work, how they're different from portable generators, and how to choose a standby model properly. How to Install Backup Generators

In this video, we outline the installation of a 16kW Generac air-cooled automatic standby generator and a RTSY-200 automatic transfer switch. This video is meant to be a basic overview. Every installation is different. Be sure to carefully follow the instructions in the installation guide and product manuals that come with your equipment. Better Power, Inc. is the largest wholesale distributor of Automatic Standby Generators in the Northeast. We offer a full line of automatic standby generators, accessories, and switches in a wide range of sizes and configurations. 1-800-475-1321 | Support@BetterPowerOnline.com We also offer classroom training for those interested in learning how to install generators and switches. If you need help marketing backup generators to your customers, we can assist you with that as well.

How to Install an Automatic Standby Generator | Ask This Old House

This Old House host Kevin O'Connor describes how to combat power outages with a standby generator. #ThisOldHouse #AskTOH SUBSCRIBE to This Old House: bit.ly/SubscribeThisOldHouse Steps for How to Install an Automatic Standby Generator 1. Install the generator at least 5 feet from all windows and doors. 2. Set the generator on top of a pre-cast concrete pad that's supported by a compacted gravel bed. 3. Secure the generator to the pad with four stainless-steel bolts. 4. Have a plumber connect a natural-gas line to the generator. 5. Have an electrician run a line-voltage cable to the generator. 6. The generator tests itself automatically by turning on every two weeks and running for about 20 minutes. 7. Each time the generator kicks on, a diagnostic signal is sent via the Internet to the homeowner and electrician. 8. A transfer switch is installed beside the electrical meter; it sends electricity into the house when the power goes out and the generator kicks on. About This Old House TV: This Old House is the No. 1 multimedia home enthusiast brand, offering trusted information and expert advice through award-winning television, a highly regarded magazine, and an information-driven website.
