Cost to Build a House

In this video a builder opens his books and reveals the details of the cost to build a house today. The video covers the cost for labor and materials to build a four bedroom, 3.5 bath home with a full basement. This video is perfect for anyone looking to save up to 30% on the cost of their new home. A real house plan that is available today is reviewed along with the estimated cost to build it. Cost adjustments for major cities throughout the U.S. are also shared. If you are looking for a video covering the details of the cost to build a house today, you will find this video very useful. Brought to you by Open Book Build LLC. For details on learnign how to build your own home visit: ownerbuilderclass.com/ The location cost adjustments at the end of the video are percentages. So for example, if the number shown is -6, you deduct 6% from the costs we show in the video for the particular location. For more details about the house plan shown in the video... advancedhouseplans.com/plan/kincaid
Disclaimer: The costs used in this video were derived from multiple sources including but not limited to: 2021 National Construction Estimator by Craftsman Books, the builder's own experience, and the latest NAHB (i.e. National Association of Home Builders) Economics and Housing Policy Group, Cost of Constructing a Home. Construction costs can vary greatly from one location to the next due to material and labor shortages and local market conditions. Individual customer finish and design choices can also create large swings in labor and material costs for a given project. Building code differences from one location to the next were not considered when preparing the labor and material costs presented here. Armchair Builder, Michael Luckado, and Open Book Build LLC have no affiliation with Menards or Advanced House Plans.

Building a house will cost you anywhere from 150-500 a foot, depending on size, labor, location and materials you choose. So if you are building a 2200 sq ft two storey, with and unfinished basement, and you already own the lot, expect to pay anywhere from 300K to 1Million to build it from start to finish. 150-350 is a big difference you ask, and you would be right. But you wanted something quick, didn't you? So, if you are building a base model, nothing special or super fancy, new, and well built home, you will be safe to estimate \$150 a square foot. 300 a square foot? Your getting into the nicer show homes that the track builders build. They will have the butlers pantry, the ship lap feature, nice garage doors, etc. Here you can be in a custom cabinetry and quartz territory. \$500 a square foot on the other hand, is where you want custom everything. High end finishes, high quality, and typically things in the house you wouldn't find in a standard home like secret rooms, an elevator, or a copious amount of important finishes that you just have to have. Take into consideration that I typically build and sell my homes from \$500+/sqft, there are many factors that come into play that often bring people up above that range. So there are so many differing factors affecting home building prices, that it's impossible to have a one size fits all that works everywhere. Instead, there are some important factors that you need to consider if you want to dive deeper and get a clearer view of estimating you build. These factors are: Location, Size, Labor, Material
Location: A hot market is exactly that. Things cost more. Its more expensive to build, its more expensive to buy, and its more expensive to hire builders. If you are in a hot market, you have to realize that your labor costs, lot costs, and even material costs might increase substantially. For an easy example, think about the difference in building cost in a home in Orange County California, vs in Saskatoon, Saskatchewan. A 3000 sq ft two storey home might go for 600K in Saskatoon vs. 6 million in orange county. Size. Building a smaller home will generally mean it will be cheaper. But remember that you will always have a base price to simply get them onsite. Also, building bigger might mean more complex construction, uncommon material and specialized labor. Labor: You should know that builders are NOT all the same. Anyone builder can build you a house, but not everyone can build you a well built house. Also, if there is a labor shortage, be prepared to pay a premium to get your project moved up to the head of the line. Material: They say that 80% of the home is invariable. meaning, the cost is pretty much the cost. The same 2x4 costs the same in an average house, as an luxury home, and the same concrete used costs the same as well. Where the biggest jump comes is in the finishing costs. That 20% of variable costs can mean the difference between a 900K build and a 1.2 million dollar build.

Cost to Build a House in 2020

We just finished up building a new home so we thought we would share the cost to build a house in 2020. If you are thinking of building a new home as an owner builder, or through a general contractor, this video should give you a good starting point for planning and budgeting. The prices shown are for those wanting to build their own home while taking on the general contractor role and hiring professional subcontractors to do the work. Be sure to watch through to the end to learn how to get a free cost adjustment for your area. Stop by openbookbuild.com for more details on how to build this home. openbookbuild.com/home The final cost of \$100 per square foot includes finishing the basement as a DIY project in the future. We spent a bunch of money on building out the basement to allow for an easier finish: 2 bedroom egress windows(\$3k), waterproofing (\$2k), insulated basement floor (\$1k), 9' tall basement wall where standard is 8' tall (\$2k), radon mitigation, careful mechanical planning to prevent duct work from lowering ceiling, above grade foundation wall insulation, mechanical room placed as to not

affect future living space, included future finished basement layout on house plan to make things easier for future finish, careful basement beam placement to line up with future finished basement walls...etc. Our whole objective with this home was to make it as affordable as possible while still including some nice finishes. We could have added a second floor to lower the per square foot price drastically, keep this in mind if you are trying to lower your new home cost. Instead, we chose to create the basement to allow for future expansion. This allows the owner to finish the basement at their own pace when ready. Once finished, the house will be a four bedroom, 3 bath home. We named our company Open Book Build to share our resources and experience with those that want to build. How many builders would share their actual costs from a build? Most builders wouldn't do this...but we aren't like most builders. The cost to design this architectural house plan was over ten times what we are selling it for at openbookbuild.com. Thanks for watching and good luck to you. If you want to build your own custom home and want to learn how, check out our Owner Builder Online Class at ownerbuilderclass.com/

Buying vs Building A House (Pros & Cons)

To start comparing quotes and simplify insurance-buying check out Policygenius: policygenius.com/whiteboardfinance Thanks to Policygenius for sponsoring this video! Buying vs Building a home is a question that many potential homeowners ask themselves. In this video, I discuss the pros and cons of buying vs building a home. With current interest rates so low, and demand so high, people are starting to consider building vs buying a home. With a custom home, you get exactly what you want. With an existing home, you are stuck with a lot of the "bones" of the home, although the interior of the house can be improved to whatever you like. There are also many other factors like land, competition from other buyers, etc. Please share this video with a friend on social media! Cost to Build a House: Material Pricing

Approximately half of the cost to build a new home is in the material so it's really important for owner builders to keep an eye on costs both current and future trends. In this video we take a look at the current costs of the commodity materials that go into a new home and discuss where they are going over the next several months. We introduce the Romac Building Supply Whole House Commodity Index that is a great way to track commodity costs that go into new homes.
