[en.wikipedia.org](#) > [wiki](#) > [Indoor_moldIndoor mold - Wikipedia](#)

Mold (American English) or mould (British English), also sometimes referred to as mildew, is a fungal growth that develops on wet materials. Mold is a natural part of the environment and plays an important part in nature by breaking down dead organic matter such as fallen leaves and dead trees; indoors, mold growth should be avoided.

Tips on Performing a Mold Inspection

Subscribe to our YouTube Channel: youtube.com/c/internachi?sub_confirmation=1 You will learn tips on performing a certified mold inspection. We'll concentrate on the non-invasive, visual examination of the readily accessible and installed systems and components listed in the IAC2 Mold Inspection Standards of Practice. In most cases, if visible mold growth is present, sampling is unnecessary. This online class is live, free, and open to everyone. Visit nachi.org/webinar to join our next live class

Mold Inspection And Air Quality Testing

Dan Brave of Expert Mold Test, in St. Petersburg Florida, was called to the house of a local voice talent who was concerned over a potential mold infestation. This video shows the process of a typical mold inspection and air quality test. 727-321-9296

Home Inspection Mold Testing for Mold in Your Home

Should I test for mold? The answer is maybe, maybe not. First, there are two types of mold testing: a swab or tape test vs. the air sample test. A swab test is where you collect a sample from visible mold to test it. The air sample test compares the levels of airborne mold between the inside and outside of your home. If the levels are much higher inside, then you have a mold issue. So should you test? Well if you can see mold, there's no need to test unless you need to know what type of mold it is. Just get rid of the mold! That said, there are 4 potential reasons you could want to test for mold: 1) Allergic to a specific mold species. The type of mold could be good information to know. 2) Maybe you live in a house that is clean and you can't see or smell mold but someone is sensitive to mold. 3) Feel sick when at home, but fine at work. 4) Home inspector sees something which looks like mold.

Mold Remediation Inspection: How Bad is Too Bad

amerifirst.com/buying-foreclosed-homes If you're considering buying a foreclosed home, a house that's sat vacant since the owners left, you may find a diamond in the rough that has some minor repairs like peeling paint or maybe a ripped screen door. You may find yourself saying, "We can do this. It's not a bad deal." Just be careful. You never know what nightmares lie in wait inside for you. This video takes you through a house where a pipe burst, and water more than a foot deep sat for months, unattended. Mold grew all over the house. Now ServiceMaster of Kalamazoo takes us through the house to see just how bad the damage is, and what they might be able to do to fix it. Ron Kilian - Operations Manager at ServiceMaster of Kalamazoo - is full of knowledge and expertise. And he says there's almost no house too damaged that they can't take care of. So from minor repairs like a ripped screen door, to the major house repairs like a mold remediation...almost nothing is impossible with a renovation mortgage. Just make sure the experts are helping you out. And make sure that you educate yourself as well. youtube.com/channel/UCqb6J_zwhT9zJXtV2C33xRA?sub_confirmation=1 This video provides a step by step approach on how to perform a mold remediation for small scale mold infestation. The process involved removing moldy drywall, insulation materials, carpet, padding tack-strips, and other items affected by mold growth. First the area inspected for mold, then containment barrier and air scrubber is installed to clean the air while remediation is in progress. Mold Remediation process. Safety gear is worn by individuals working in the containment. The moldy materials are removed (insulation, drywall, base boards, tack-strips, padding, carpet) Structural wooden members are cleaned with detergent solution. Biocides such as chlorine bleach is not necessary in this application. Wood is HEPA Vacuumed to remove mold spores. Wall is allowed to dry out for 24 - 48 hours Test moisture content of the wood. If dry, begin to reinstall the new building materials Information on Mold Remediation: Mold remediation refers to the methods used to successfully remove building components and items that are impacted by mold or microbial growth. Mold remediation professionals are trained to remove mold growth, clean and sanitize areas that show signs of microbial growth, and perform post-remediation air clearance testing activities. These individuals are recommended when the mold growth covers areas greater than 10 square feet, when mold growth is caused by contaminated water (Category 2 or 3), and when recommended by a physician. When choosing a mold remediation company, there are several key questions that should be considered. First, is the company certified to perform mold remediation activities? Second, is the company insured and do they carry the right coverage? Third, are workers trained, and do they use safe work practices? Fourth, do they have the proper equipment (air purifying machines, HEPA vacuums, dehumidifiers, etc.)? Fifth, what methods are used to protect the home occupants from mold spores disturbed during the remediation? Is the area contained?
