## How much it Costs to Charge a Tesla Model 3 at Home

I'm going to use my Tesla Model 3 Mid-Range which has EPA class of 123 MPGe which is rated at 3.7 miles per KWH. Now let's take the average miles driven yearly in the US, which again is 13,476 miles divided by 3.7 miles per KWH. This gives us a total of 3,642 KWH of Electricity. We now have to multiple the price of the average KWH in the US which again is 13 cents. This Gives us a total of \$473 dollars to charge the tesla model 3 midrange yearly. Want a Tesla? Get \$FREE Supercharger miles! [ts.la/evan87711](https://ts.la/evan87711) Get MORE Tesla Accessories! [evanmichiels.com/general2](https://evanmichiels.com/general2)

Must Have Accessories for your Tesla Model 3! TapTes Wireless Phone Charger Dock : [bit.ly/2ykU3bZ](https://bit.ly/2ykU3bZ) Google WiFi System, 3-Pack - Router Extender: [amzn.to/2trlxDA](https://amzn.to/2trlxDA) SanDisk Extreme Portable External Storage SSD: [amzn.to/2u2YLSa](https://amzn.to/2u2YLSa) 3D MAXpider All Weather Floor Mats: [amzn.to/2PYE5uh](https://amzn.to/2PYE5uh) EV Armor Wrap Kit: [amzn.to/2rvZpjh](https://amzn.to/2rvZpjh)

Thank you so much! #teslamodel3 #tesla #model3 Let's now compare this yearly price with my previous vehicle, the 2009 Audi A4. Still driving 13,476 miles per year with a rating of 25 MPG at an average premium gasoline price of \$3.37 per gallon here in North Carolina, the cost would come out to \$1,816.56 with a total consumption of 539 gallons of gasoline. Not to mention emitting 10,560 pounds of CO2 emissions into the air. To see how much money we saved by switching to a tesla model 3, lets take our original yearly gasoline price from the audi which was 1,816.56 minus our yearly energy cost of the tesla at 473.00. After doing the math we would save \$1,343.56 per year in energy costs. As we can see, a tesla model 3 is far more efficient than your traditional gasoline car and are financially superior in the long term for transportation. Lets put this into perspective, with these average numbers I mentioned before and if the tesla model 3 owner were to keep the car for 8 years. They would see a savings of 10,748 dollars and that's if these energy prices stay the same in the future. I personally think over time electricity costs will come down with the advancement in renewable energy technology like wind and solar power options. Keep in mind charging at public locations and tesla superchargers will have an impact on this total savings number. Typically, Tesla Superchargers will cost 28 cents per KWH and the largest online network, ChargePoint, will vary from mostly Free to 1-3 dollars per hour. Again, this will all vary based on your city. To find out how much money you could save I have posted a link below on all the states with their electricity rates along with some other helpful calculators I found. If you are looking at buying a tesla here in the future be sure to use my referral link to receive free super charger miles. ## Can I charge my Tesla on a standard home outlet

When I purchased my Tesla, I was curious if I needed to purchase the Tesla home charger or if I could simply plug into a standard wall outlet. For some people, this might be a cheap and easy option, but for most people, this isn't your best choice. Here's some info to consider: Use my link when you buy a Tesla to get 1,000 free supercharger miles: [geni.us/W6vg](https://geni.us/W6vg) Filmed this

----- Yooo! Thanks for stopping by and watching this video! Just a little background info on myself and this channel: I started this operation in 2012 with the hopes of helping fellow sneakerheads and entertaining those in the community. The majority of my videos at the beginning of my career were based on restorations and tutorials. As time progressed, I ventured into sneaker reviews, clothing hauls, pickups, vlogs, etc. I really enjoy making content that has variety, which is something that I highly value. I am extremely grateful and thankful for everyone that has helped me build and expand. Without you guys, there is nothing. Thank you!!!

## Tesla Home Charging Options

In this video, I do a series of tests on 3 different charging options I have available to me in my home. How convenient is charging an EV car at home? How fast is it? I explore all fo these options. 0:00 - Intro 1:00 - 110V Wall Outlet 1:47 - 230V Outlet 2:37 - Tesla Wall Connector 4:12 - Other Charging Options 4:59 - Summary/Conclusions Disclaimer: In this video I'm using a 14-50 generator hookup in my garage. This hookup is supposed to push electricity into my house and it is not an open circuit. To enable the circuit for the generator, you need to disconnect power to your entire house. For this video, I bypassed the interlock in my house panel to allow power to flow out to the outlet. I don't recommend you try thing yourself. If you are looking to get 1000 free Supercharger miles when buying your Tesla, please feel free to use my referral code: [tesla.com/referral/jim58610](http://tesla.com/referral/jim58610)

## How Much Does It Cost To Charge A Tesla Model 3 (Home, Public, Supercharging) VS Gas

In this video, I explain all the different ways you can charge your Tesla Model 3 and the costs associated with those charging methods. Then I compare that to how much an ICE car costs to fuel up. If you thought the video was helpful, don't forget to comment, like, share and subscribe! Thanks for watching! Check out the free Optiwatt app and start saving money on your home charging! With my Tesla it's great because it automatically charges overnight when electricity is at its cheapest (known as "off peak" electricity rate) and when I wake up, my car has enough battery charge to satisfy my daily driving needs. If you drive 50 miles or less during your daily driving you can probably get by with charging on a normal outlet, which on my Long Range Model 3 would regain about 5 miles of range per hour of charge. However, I drive over 400 miles a week so I needed a 240v NEMA 1450 outlet installed in my garage in order to charge my Tesla Model 3 at a rate of 30 miles per hour which can essentially charge the car from 0-100% in 10 hours. Unfortunately my breaker box is about the furthest it can possibly be from my garage so I had to hire an electrician to run cable alongside my house, under my yard, and into my garage which cost me \$1300 right off the bat before I even got my car but I got a 30% tax credit which made my out of pocket cost \$900. Some is lost along the way due to heat and other factors so the final amount of electricity that makes it into the battery is called "wall to wheels" efficiency and based on TeslaFi (an app used to track Tesla charging stats for owners) it says a 240-volt Tesla Wall Connector can average 94% efficiency. If we assume 94% wall to wheels efficiency we also have to consider phantom drain which is the electricity lost when an electric vehicle is parked while not plugged in to a charging outlet so for example every day for 8 hours my car is in a parking lot unplugged and it loses some charge over that period. I average about 2,000 miles per year for traveling on road trips which means 8% of my total miles are when traveling and 92% is from home charging. For home charging, my off-peak electricity rate is \$0.07080 per kWh. 92% of the 20,728 kWh has been home charging which means I've spent about \$1,350 on home charging so far + \$54 on Supercharging so after 75,368 miles I've spent a total of \$1,404 on charging. To that in perspective, if we consider a popular Tesla competitor from the same year, a 2018 BMW 3 series that averages 28 miles per gallon & also requires premium gasoline (which costs an average of \$3.475 a gallon in my county) to drive that BMW the same amount of miles the fuel cost would be about \$9,353. That's \$8,000 in fuel savings after 3 years. I plan to keep my Tesla Model 3 for at least 10 years so if I keep this up, after another 7 years the savings could be close to \$25,000 which could pay for a solar roof and allow me to charge for free for the rest of time. That's another advantage of an electric vehicle: it can be charged from 100% renewable energy. As an Amazon Associate & partner for other affiliate programs I earn from qualifying purchases
