How to Figure the Cost of Replacing a Water Heater

How to Figure the Cost of Replacing a Water Heater. Part of the series: Water Heaters. When it comes to replacing your hot water heater, the main expense is the heater itself. Figure the cost of replacing a water heater with help from a Foreman for Lighty Contractors in this free video clip.

How much does it cost to replace a water heater

When you are buying a house one of the things to always look at and that is how old is the water heater, there is a small tag on the water heater that will tell you when it was installed, you basically want a water heater that is less than 10 years old. If it is older than that it would be a good idea to replace it. Generally it costs \$800 to \$1,500 to replace a water heater which is not such a huge deal but it's good to always have a good working water heater because well it heats your water. If you are looking for houses in the Minneapolis metro give us a call and we would love to help you out! Johansson Realty 612.423.0202

How to choose a Hot Water Heater - Costs & Warranty

► Costs to Install / Replace a Water Heater: remodelingcalculator.org/costs-install-hot-water-heater/ ► Water Heater Calculator: remodelingcalculator.org/water-heater-calculator/ ► Tankless Water Heater Calculator: remodelingcalculator.org/tankless-water-heater-cost-calculator/ ► Learn which water heater you should get - 6, 9 or 12 years warranty, Home Depot brand or from Plumbing Supply, etc. Water heaters are NOT expensive, but you should still do some research before going to home depot/lowe's and buying the cheapest or most expensive unit they have. There are certain things you need to know before choosing your water heater. Here we will just talk about TANK water heaters, leaving TANKLESS for another video. First, I recommend that you get the longest warranty period possible. Each step will cost you about \$100. Warranties for Home Improvement stores go in 3 year increments, starting with 6. For example - a 6 year, 40 gallon gas water heater will cost about \$400. A 9 year 40 gallon will cost \$500 and a 12 year will be about \$580. So you may think - 50% (\$180-200) difference in upfront cost between 6 and 12 years, but also consider that at year 6, when you need to replace the cheap unit, you will also have to shell out \$700 for replacement labor. Also cost per year is \$67 for a 6 year unit and \$50 for a 12 year unit. In addition, a 12 year unit is more energy efficient, so you will save additional money on gas (or electricity). Now if you will definitely move within 5-6 years, then maybe you should go for a cheaper model. remodelingcalculator.org/

Need to Replace Your Water Heater Let's Discuss Your Options During AO Smith 50 Gallon Installation

Is your hot water not as hot as it used to be? Does your heater take a long time to "recover" or replenish hot water after a shower or taking a bath? Or did your water heater die and considering replacement due age and repair costs? Let's discuss your options! Want Merch? Here you go! teespring.com/stores/mikey-pipes There are 3 ways to heat your domestic water: Tank Style - options include gas, oil, electric (heat pump) *This is the most common Tankless - gas or electric *gaining popularity Indirect - requires a hydronic boiler Research has shown that the most efficient method (energy consumption) is a tankless water heater. If your electric rates are low and/or you have a solar PV system this is a no-brainer. Second on the list is a indirect fired water heater. If you have a hydronic boiler for space heating - consider this contender. Your boiler would need to be configured with additional piping and electrical components to add a super insulated tank - creating an "additional zone". Instead of a thermostat for a zone in your home, the tank has an "aquastat" which senses the water temperature inside the tank. The bad part of this setup, if the boiler goes out - not only do you not have heat for your home - you also lose hot water. Finally, we have the tanks! No, not those huge war machines the military uses - I'm talking about tanks that heat water and store it. There are basically 2 types. One type uses a fossil fuel like natural gas, LP or oil. The other type is electric - whether it has electric heating elements inside the tank or heat pump water heaters. Just for general discussion, lets compare a gas water heater vs. a gas tankless. Gas Fired Water Heater like: amzn.to/2OWmZiR which we commonly install Pros: 1. as a direct replacement - most cost effective for initial investment 2. replacement generally takes less than 3 hours for most plumbers & professionals 3. relatively zero maintenance - yes, you should drain/flush the heater annually and in some parts of the country - replace the anode rods as needed 4. If your electric goes out, you still have hot water (generally) Cons: 1. pre-determined amount of water 2. not energy efficient Gas Fired Tankless Water Heater like: amzn.to/2NiZDTo Pros: 1. endless hot water (as long as you dont exceed gallons per minute) 2. lower operating cost 3. convenience of use 4. space saving - especially if you have limited space for a tank Cons: 1. no electricity, no hot water - unless you have a generator 2. initial cost of investment to install is higher. 3. more complex installation process 4. requires annual maintenance - you can do this yourself or hire a professional. Considering an electric tankless water heater - I've installed this model or a similar model for my clients: amzn.to/3bdIkLO Considering a gas tankless water heater? We generally install Navien. Like this model: navieninc.com/products/npe-240a
