Building a house will cost you anywhere from 150-500 a foot, depending on size, labor, location and materials you choose. So if you are building a 2200 sq ft two storey, with and unfinished basement, and you already own the lot, expect to pay anywhere from 300K to 1Million to build it from start to finish. 150-350 is a big difference you ask, and you would be right. But you wanted something quick, didn't you? So, if you are building a base model, nothing special or super fancy, new, and well built home, you will be safe to estimate \$150 a square foot. 300 a square foot? Your getting into the nicer show homes that the track builders build. They will have the butlers pantry, the ship lap feature, nice garage doors, etc. Here you can be in a custom cabinetry and quartz territory. \$500 a square foot on the other hand, is where you want custom everything. High end finishes, high quality, and typically things in the house you wouldn't find in a standard home like secret rooms, an elevator, or a copious amount of important finishes that you just have to have. Take into consideration that I typically build and sell my homes from \$500+/sqft, there are many factors that come into play that often bring people up above that range. So there are so many differing factors affecting home building prices, that it's impossible to have a one size fits all that works everywhere. Instead, there are some important factors that you need to consider if you want to dive deeper and get a clearer view of estimating you build. These factors are: Location, Size, Labor, Material Location: A hot market is exactly that. Things cost more. Its more expensive to build, its more expensive to buy, and its more expensive to hire builders. If you are in a hot market, you have to realize that your labor costs, lot costs, and even material costs might increase substantially. For an easy example, think about the difference in building cost in a home in Orange County California, vs in Saskatoon, Saskatchewan. A 3000 sq ft two storey home might go for 600K in Saskatoon vs. 6 million in orange county. Size. Building a smaller home will generally mean it will be cheaper. But remember that you will always have a base price to simply get them onsite. Also, building bigger might mean more complex construction, uncommon material and specialized labor. Labor: You should know that builders are NOT all the same. Anyone builder can build you a house, but not everyone can build you a well built house. Also, if there is a labor shortage, be prepared to pay a premium to get your project moved up to the head of the line. Material: They say that 80% of the home is invariable. meaning, the cost is pretty much the cost. The same 2x4 costs the same in an average house, as an luxury home, and the same concrete used costs the same as well. Where the biggest jump comes is in the finishing costs. That 20% of variable costs can mean the difference between a 900K build and a 1.2 million dollar build.

How Much Does It Cost to Build a House Yourself

If you plan to build your home yourself – with your own two hands – you're probably assuming that it's cheaper than having someone else do it for you. And that would be mostly true, but there are some things you need to consider. Building a home can be a rewarding experience. You have a lot of control over your home, including your location, the type of land and lot size, and the home's design. If you have the ability to be your own general contractor, building the home on your own will save you money and give you even more control over the quality of the house.

40ft DIY Shipping Container Home (Total Cost Breakdown)

In this video we go over 15 sections you will need to consider when building your 40ft. shipping container home. We go over the materials used in our latest build and the HARD COSTS for each section. DIY Cabin Cost Breakdown

Well, you guys have asked, so I have answered! Ultimately, I didn't know how much this would end up costing me because I didn't have everything lined up in terms of what I wanted to do. It was an organic process that worked well (for me). Below are some of the cost breakdowns. I will add some affiliate links below if any of the items I used, interest you! Thanks for watching and be sure to Like & Subscribe! MERCH! - etsy.com/shop/TheWildbones If you want to support - patreon.com/woodnessgoodness CABIN COST: Foundation - \$360 Floor Structure - \$1000 Walls - \$1000 Roof Structure - \$1200 Metal Roof - \$1000 Cedar Siding, Tyvek, etc. - \$2000 Hopper Windows and Door handle - \$600 Framing Nailer & Staper (for cedar) - \$400 Paint \$80 TOTAL COST THUS FAR - \$8000 The Tools I Use: Framing Nailer - amzn.to/2zBKTbw Crown Stapler - amzn.to/2Z46TXg Mitre Saw - amzn.to/3cydop1 Air Compressor - amzn.to/2yYVfSi Favorite Drill/Driver - amzn.to/2yLZfWY Best Caulk - amzn.to/2y1Y4SP If there's another link to something I use you can request!

12'x24' DIY Shed Build (Part 10 - Summary, Materials, & Cost)

Welcome to the final episode of our shed build to summarize the project and discuss materials and cost. This video shows a kind of time lapse of the entire build while I discuss the materials I used for each phase. The beginning of each phase shows a screen shot of a spreadsheet listing the materials and cost for that phase. See the timestamps below for each of the materials screen shots if you'd like a longer look at each list. Please remember that all of the build that's happening in the background is documented in greater detail in the other videos in this series. Material/Cost Screenshot Timestamps: 0:39 - Floor (Home Depot - no discount) 1:17 - Walls (Lowe's material discounted through bid desk) 2:06 - Roof (Lowe's material discounted through bid desk) 4:59 - Windows (Lowe's material discounted through bid desk) This is a 12'x24' wooden shed with a single slope metal roof and LP SmartSide siding. I'll try to summarize some of the construction stats/key points here: FLOOR: - 12' x 24' - 4' x 4' treated skid foundation - 2" x 8" joists @ 16" OC - 3/4" plywood subfloor WALLS: - 2" x 4" construction with double top plates - (3) 3' x 2' sliding windows - DIY double door - 59" x 80" - 1/2" OSB sheathing - House wrap - LP SmartSide paneling ROOF: - 16' x 27' - 1.5-in-12 pitch (minimum recommended by metal roof mfr), single slope - 2" x 8" rafters @ 24" OC - 1/2" plywood sheathing, with sheathing clips - Synthetic roofing paper - 29 gauge galvalume metal roofing panels (3' x 16' each) Thanks for watching! *** Check out our weekly live streams every Wednesday at 6PM AZ time! *** Follow us... DIY Basketball Court - How much does it cost

I have just built a DIY basketball court at my backyard. The size of the basketball court is 30 feet x 25 feet. The court itself is made off 4-inch thick concrete with rebar. And the goal post is sitting on top of 4-foot deep concrete footing. The entire process from just grass to basketball court took about 1.5 week. It could have been faster but my contractor only works after 5pm because he works for a larger construction company during the day (probably why my price is much cheaper). The concrete were pour on Saturday morning (only took a couple of hours), then we wait about 72 hours before removing the wood forms. Then we install the goal (only took about 3 hours). If you would like to buy a basketball goal from Amazon, like the goal (Goaliath) I used in this video, please consider using my link to support my channel: amzn.to/2ESUOfI I have this video has been useful for anyone building your own basketball court. Thank you for watching, please LIKE and SUBSCRIBE! #basketballcourt #diybasketballcourt #basketball
