TRY THIS...(Pre-Cut Plywood) Plywood sheets are very hard for most DIYers to transport. But, you don't necessarily have to buy full-sized sheets. This short video from The Honest Carpenter will show you an easy, affordable option! Full-sized plywood sheets are 4'X8'...that won't fit in many standard cars! Places like Lowes and Home Depot, and even some smaller lumberyards, will cut sheets down for you. But it's time-consuming, and they sometimes make ragged, messy cuts. If you only need smaller amounts of lumber, consider buying PRE-CUT PLYWOOD PANELS. These smaller pieces of plywood can be found in the lumber or building materials area. They frequently come in 4'x4' sizes, or 2'x4'. These pieces are typically cut down to size at the mill before they are delivered to the store. So, the edge quality tends to be better than things cut down in the store. Also, they are priced relative to size, so you don't have to pay much more for pre-cut plywood panels. These half-sheets and quarter-sheets are very convenient because you can just grab them and go! Thanks for watching! Expensive price of OSB Sheet is \$47.55 at Home Depot!!! Plywood is \$63!!! Super Expensive!

Hi everybody, and welcome to my "stevenofpa" YouTube Channel! This video shows you what it's like to see some of the highest prices for home building supplies that we've ever seen at Home Depot. Very expensive building products. One of the most common lumber sizes, a 4x8 sheet of OSB plywood, is normally around \$15 or \$16 each, but now they're more than TRIPLE that, over \$45, and for regular plywood not OSB it's like \$63 for each sheet. WOW!. That's Amazingly expensive! Probably due to trade tariffs or materials shortages or deficit or something else like that. Expensive price of lumber wood and building materials at Home Depot and Lowe's. Please post your questions and comments below, and Thanks for Watching. ENJOY! If you like my videos, Please SUBSCRIBE. Thanks! Video uploaded 5/9/2021, published 5/17/2021 Video renamed on 6/5/21 Old name was: OSB Sheet is \$47.55 at Home Depot!!! Plywood is \$63!!! Super Expensive!

(1/2" Plywood Vs. 3/4" Plywood--When to Use) Many new woodworkers and DIYers rush to use 3/4" plywood for any small project. But, in many cases, 3/4" plywood is overkill! This short video from The Honest Carpenter will show you a better alternative for many DIY projects--1/2" plywood! 1/2" plywood comes in nearly every variety that 3/4" plywood does. It's extremely strong and stable. Many people seem to avoid 1/2" plywood on the assumption that it's weak. But, it has many of the same properties as 3/4" plywood. (3/4" is a much more common measurement for wood in general--this may be one of the reasons that people assume that they need to purchase 3/4" plywood.) BENEFITS OF 1/2" PLYWOOD: --It's lighter (by almost 20 lbs. per sheet) --It's cheaper (by \$10-12 on average per sheet) --It's easier on tools --It produces less sawdust --It is easier to handle and manipulate --It has an edge just wide enough to be hit with brads and trim nails SITUATIONS WHERE 3/4" PLYWOOD IS PREFERRED: --Anything that will be walked on --Anything that will be hit hard with tools --Anything that will be roughly handled. TIPS FOR WORKING WITH 1/2" PLYWOOD: --Try not to span it more than 24" unsupported in any direction --Get support directly beneath the edges --Use glue when bonding pieces --Use face frames for additional support on trim projects Thanks for watching!
